

A. Epistemic landscape — D1
(plateaus = stable paradigms; peaks = high-truth but unstable)

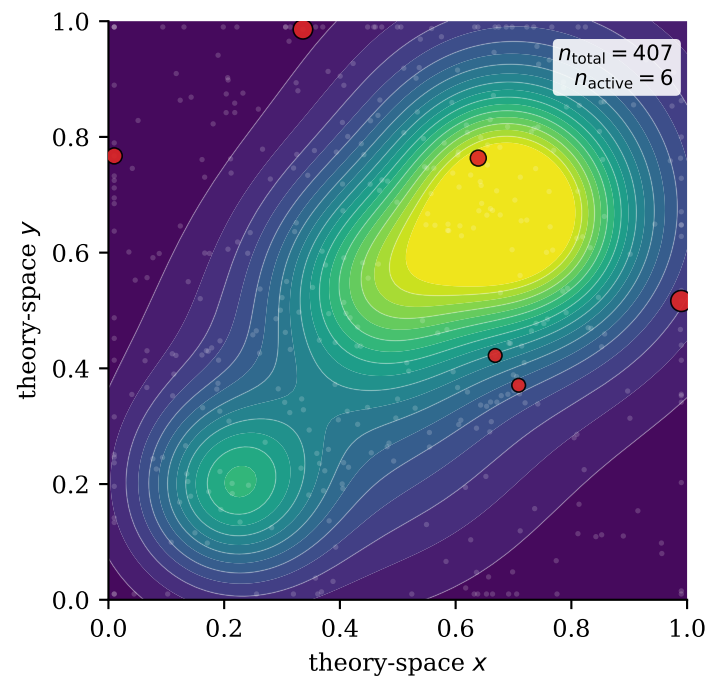

B. Same landscape (top-down view) with seed-model position

C. Peaked scenario, $t = 300$
(439 total models in D1)

D. Broad scenario, $t = 300$
(407 total models in D1)

Faint white background dots: every model published in this domain (publication history). Foreground dots: currently-active models (salience ≥ 0.05); red = high truthfulness ($\theta_{\text{actual}} \geq 0.50$), grey = low truthfulness. Dot size $\propto$ salience. Colormap: yellow = high truth (plateaus + peaks), dark = low-truth basins.
